

HKX UNIVERSAL BREAKER TIMER CONTROLLER

- ▶ Hydraulic pilot control: independent of any controls upstream of breaker valve shift cap
- ▶ User Interface is accessible on browser of any device with Wi-Fi, and allows setting of ON time, OFF time, and enable.
- ▶ ON time can be set with a range of 1- 60 seconds, OFF time can be set with a range of 1- 30 seconds. Turning enable off disables the control.
- ▶ When enabled, the controller will allow breaker operation for the duration of ON time setting, then sends a signal to the pilot valve to shift, venting the shift cap to tank for the duration of OFF time setting. Operator must wait the duration of the OFF time and release the controls before allowing breaker operation and starting the sequence again.

HKX Breaker Timer

Add a breaker timer to any kit with hydraulic pilot controls!

- ▶ Sub-kit consists of controller, harnesses, pressure switch, pilot valve, mounting hardware, and fittings.
